

The image shows a Visual Studio Code editor window with three tabs labeled 'hola.py'. The active tab contains a Python script with a `print()` statement and a multi-line string. The string contains four lines of text, each followed by a dictionary entry in quotes: `"nombre": Unknown word.`, `"Tengo": Unknown word.`, `"favorito": Unknown word.`, and `"comida": Unknown word.`. The string is enclosed in triple quotes. The terminal at the bottom shows the command `python hola.py` being executed, and the output is the same four lines of text as in the string. The terminal prompt is `PS C:\Users\PC\Documents\lyfter\python shiet>`.

```
1 print("""
2 Mi nombre es yeshua "nombre": Unknown word.
3 Tengo 22 años "Tengo": Unknown word.
4 Mi color favorito es el azul "favorito": Unknown word.
5 Mi comida favorita es la pizza "comida": Unknown word.
6
7 """)
```

PS C:\Users\PC\Documents\lyfter\python shiet> & C:/Users/PC/AppData/Local/Programs/Python/Python314/python.exe "c:/Users/PC/Documents/lyfter/python shiet/hola.py"

Mi nombre es yeshua
Tengo 22 años
Mi color favorito es el azul
Mi comida favorita es la pizza

PS C:\Users\PC\Documents\lyfter\python shiet> |

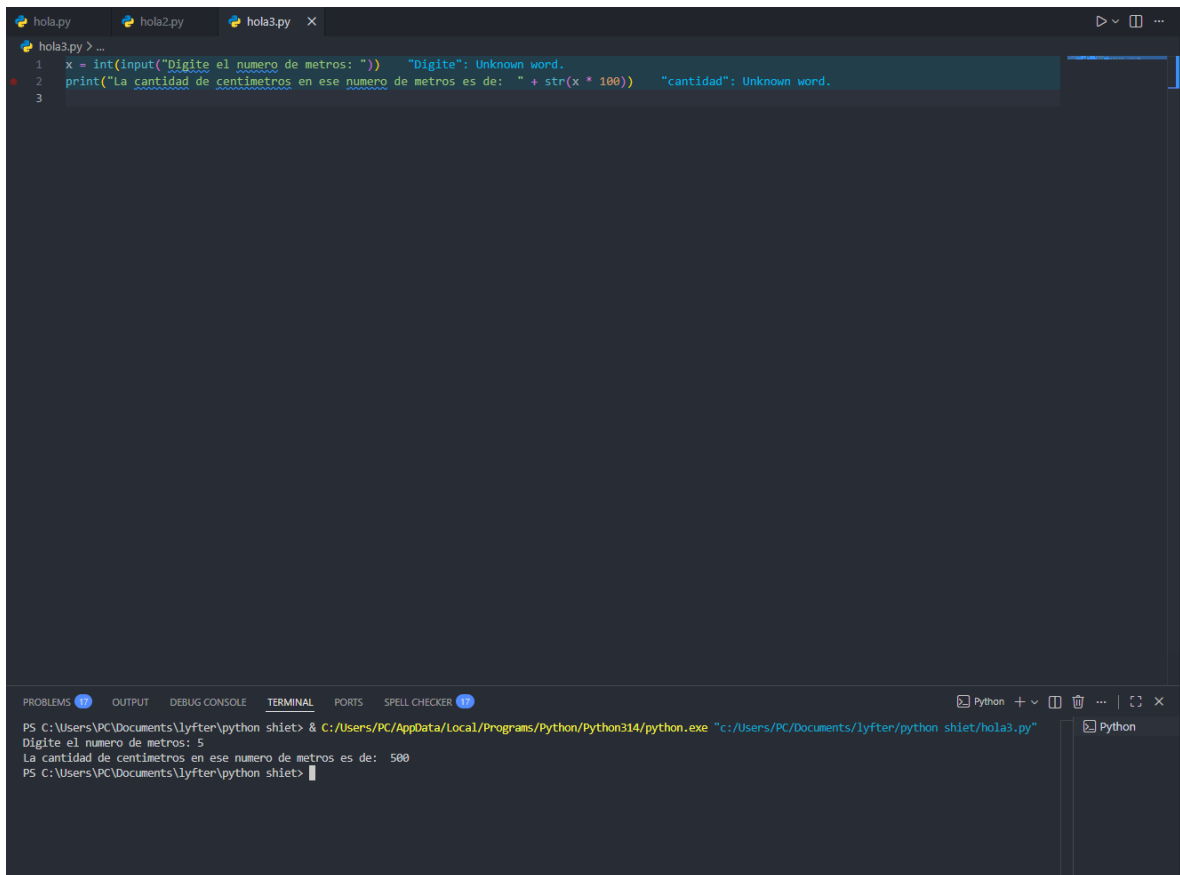

The image shows a Visual Studio Code editor window with three tabs: `hola.py`, `hola2.py` (active), and `hola3.py`. The active file `hola2.py` contains the following code:

```
1 print("Dentro de 10 años yo voy a tener: " + str(22 + 10) + " años")
```

A tooltip for the variable `tener` is visible, showing the value `"Dentro": Unknown word.`

Below the editor is a panel with tabs for `PROBLEMS`, `OUTPUT`, `DEBUG CONSOLE`, `TERMINAL` (active), `PORTS`, and `SPELL CHECKER`. The terminal window shows the command prompt output:

```
PS C:\Users\PC\Documents\lyfter\python shiet> & C:/Users/PC/AppData/Local/Programs/Python/Python314/python.exe "c:/Users/PC/Documents/lyfter/python shiet/hola2.py"
Dentro de 10 años yo voy a tener: 32 años
PS C:\Users\PC\Documents\lyfter\python shiet>
```

The image shows a Visual Studio Code editor window with three tabs: `hola.py`, `hola2.py`, and `hola3.py`. The `hola3.py` tab is active, displaying the following Python code:

```
1 x = int(input("Digite el numero de metros: "))    "Digite": Unknown word.  
2 print("La cantidad de centimetros en ese numero de metros es de: " + str(x * 100))    "cantidad": Unknown word.  
3
```

Below the editor, the **TERMINAL** panel is open, showing the command prompt output of running the script:

```
PS C:\Users\PC\Documents\lyfter\python shiet> & C:/Users/PC/AppData/Local/Programs/Python/Python314/python.exe "c:/Users/PC/Documents/lyfter/python shiet/hola3.py"  
Digite el numero de metros: 5  
La cantidad de centimetros en ese numero de metros es de: 500  
PS C:\Users\PC\Documents\lyfter\python shiet>
```
